## **Shoulder Hemiarthroplasty and Total Shoulder Arthroplasty Protocol**

|             | Range of Motion   | Immobilizer   | Exercises   |  |
|-------------|---|---|---|--|
| Phase 1     | Limit ER to passive 40° to protect  | 0-6 weeks: Worn at all times (day and night) Off for gentle exercise only | Grip strengthening, gentle pendulum exercises   |  |
| 0-6 weeks   | subscapularis repair  |   | Active wrist/hand ROM at home   |  |
|             | No active IR nor extension until 6 weeks  |   | Limit ER 40° passive  |  |
|             | <b>Week 1:</b> 120 FF/20 ER at side;  |   | PROM for elbow flexion  |  |
|             | ABD max 75 without rotation   |   | No resisted internal rotation/backward extension until 12   |  |
|             | Week 2: 140 FF/40 ER at side;<br>ABD max 75 without rotation                            |   | weeks post-op   |  |
|             |   |   | Canes/pulleys may be used OK if advancing from PROM   |  |
|             |   |   | Heat before PT, ice after PT  |  |
| Phase 2     | Increase as tolerated to full   | None  | Begin light resisted ER/FF/ABD: isometrics and bands,   |  |
| 6-12 weeks  | Begin active assisted/active internal rotation and extension as tolerated after 6 weeks |   | concentric motions only   |  |
|             |   |   | No resisted internal rotation/backwards extension until 12 weeks post-op  |  |
|             | Gentle passive stretching at end ranges   |   | No scapular retractions with bands  |  |
| Phase 3     | Progress to full motion without   | None  | Begin resisted IR/BE (isometrics/bands): isometrics with light bands and weights  |  |
| 3-12 months | discomfort  |   |   |  |
|             |   |   | Advance strengthening as tolerated; 10 repetitions/1 set per exercise for rotator cuff, deltoid, and scapular stabilizers |  |
|             |   |   | Begin eccentric motions, plyometrics, and closed chain exercises at 12 weeks  |  |
|             |   |   | Progress strengthening and maximize subscapular stabilization   |  |
